Stakeholder Empathy Map

Inferred stakeholder needs for an educational analytics project

Student	Hussain Hattpipliya Wala
Institution	MEDI-CAPS University
Programme	Bachelor of Computer Applications (BCA)
Year / Semester	Second Year / Third Semester
Project	Global Olympic Sports Performance Analysis
Analytics tool	Tableau Public

Primary stakeholder groups

• NOC performance analyst: wants to compare medal totals, medal mix and participation over time.

• Sports administrator: wants a broad view of regions, sports and investment categories to guide questions for further analysis.

• Talent-development analyst: wants to inspect athlete experience, training hours, professional status and medal outcomes.

• Student / reviewer: wants clear charts, understandable labels and transparent data limitations.

What stakeholders may need to know

What is changing over time? Which countries or regions have the largest recorded medal totals? Are medal totals and athlete participation moving together? How does host-nation status appear in the displayed data? Which athlete and sport attributes are available for further exploration?

What the dashboard should help them do

• Filter and compare rather than read large raw tables.

• Spot patterns and outliers worth investigating.

• Distinguish descriptive findings from causal claims.

• Trace displayed insights back to the supplied data fields.

Assumptions and validation

This map is an analytical design aid, not interview evidence. No stakeholder interviews or usability testing are documented in the supplied materials. Validate these needs with actual users before treating them as confirmed requirements.
