Brainstorming & Idea Prioritisation

How the three dashboard scenarios map to user questions

Student	Hussain Hattpipliya Wala
Institution	MEDI-CAPS University
Programme	Bachelor of Computer Applications (BCA)
Year / Semester	Second Year / Third Semester
Project	Global Olympic Sports Performance Analysis
Analytics tool	Tableau Public

Candidate ideas

• Country/NOC medal leaderboard and medal composition.

• Medal outcomes by region and sport category.

• Athlete participation versus medal output.

• Investment-efficiency matrix using investment tier and medal-efficiency fields.

• Host-nation versus non-host comparison.

• Athlete-level talent indicators such as training hours, professional status and sport category.

Prioritisation criteria

Relevance to a stated scenario; availability of a matching field in the supplied CSVs; ease of visual interpretation; potential to support comparison; and risk of overclaiming from observational data.

Selected solution

Three Tableau Public dashboards are already shared: Scenario 1 — NOC Performance; Scenario 2 — Financial & Strategic Planning; Scenario 3 — Talent Analytics. The PDF exports are included in the Dashboard Previews folder.

Rationale

The three-dashboard structure separates country/NOC comparisons, resource-planning indicators and athlete/talent patterns, allowing each dashboard to tell a focused story while sharing the common Olympic dataset context.
