Technology Stack

Tools, datasets, and delivery channels used in the project

Student	Hussain Hattpipliya Wala
Institution	MEDI-CAPS University
Programme	Bachelor of Computer Applications (BCA)
Year / Semester	Second Year / Third Semester
Project	Global Olympic Sports Performance Analysis
Analytics tool	Tableau Public

Core stack

• Tableau Public — visual analysis, worksheet construction, dashboard assembly and public sharing.

• CSV files — source data for country rankings, athletes, games summaries and medal results.

• PDF exports — static previews of the three published dashboards.

• GitHub — intended repository destination; username supplied as Hussain782. Repository publication is not yet confirmed.

Data inventory

• alltime_country_rankings.csv: 60 rows, 13 columns; country-level ranking and medal summaries.

• athletes.csv: 8,000 rows, 26 columns; athlete attributes, participation, training and medal measures.

• games_summary.csv: 18 rows, 10 columns; Games/year-level host and participation summaries.

• medal_results.csv: 910 rows, 19 columns; country/year-level medal, region, investment-tier and host indicators.

Data workflow

CSV source files → inspect fields and data types → prepare/relate data in Tableau as needed → build worksheets → assemble scenario dashboards → publish on Tableau Public → export previews and document the analysis.

Reproducibility note

The exact Tableau workbook file and its internal calculations are not included in this package unless added separately. Do not assume a specific join, relationship, calculated field or filter implementation without checking the workbook.
