Customer Journey Map

How a stakeholder moves from a question to a Tableau insight

Student	Hussain Hattpipliya Wala
Institution	MEDI-CAPS University
Programme	Bachelor of Computer Applications (BCA)
Year / Semester	Second Year / Third Semester
Project	Global Olympic Sports Performance Analysis
Analytics tool	Tableau Public

Stage 1 — Identify the question

The stakeholder starts with a decision question: country/NOC performance, investment and strategic planning, or athlete/talent patterns.

Stage 2 — Locate relevant information

The stakeholder opens the matching Tableau Public dashboard and identifies the title, metric, year range and relevant category or region.

Stage 3 — Explore the visual

The stakeholder compares categories, countries or years and uses available filters/tooltips if they are implemented in the published view.

Stage 4 — Interpret responsibly

The stakeholder distinguishes medal totals from medal points and medal-efficiency percentages. They note whether the chart is a total, average or rate and avoid treating a visible association as a causal effect.

Stage 5 — Record a finding

The stakeholder writes one observation, the chart/measure supporting it, the relevant data caveat and a follow-up question for deeper analysis.

Stage 6 — Give feedback

The stakeholder reports unclear labels, crowded visuals, missing filters or unanswered questions. Feedback should be recorded and addressed before claiming usability validation.

Evidence note

This journey map is a proposed workflow for the project; no user interview or usability session evidence was supplied.
