Problem–Solution Fit

Why interactive Tableau dashboards fit this project

Student	Hussain Hattpipliya Wala
Institution	MEDI-CAPS University
Programme	Bachelor of Computer Applications (BCA)
Year / Semester	Second Year / Third Semester
Project	Global Olympic Sports Performance Analysis
Analytics tool	Tableau Public

Problem

Country, athlete, Games and medal information is spread across multiple datasets. Reviewing it manually makes comparisons across scenarios slower and less intuitive.

Target users

NOC analysts, sports administrators, talent-development teams and academic reviewers who need descriptive visual comparisons.

Proposed solution

A three-dashboard Tableau Public project that groups related questions into NOC performance, financial/strategic planning and talent analytics.

Value proposition

• Turns tables into visual comparisons.

• Makes regional, temporal and country-level patterns easier to spot.

• Separates strategic questions into three focused dashboards.

• Supports exploratory decision-making without claiming causal proof.

Evidence available

Three dashboard PDF exports and published Tableau Public links are supplied. These demonstrate that dashboard views exist; they do not, by themselves, prove stakeholder adoption, usability, or business impact.

Validation still recommended

Test the live dashboards with a small set of representative users. Ask them to locate a country, explain a chart, apply a filter and describe one insight plus one limitation. Record feedback before claiming usability validation.
