Project Plan & Milestones

Planned work sequence and completion checklist

Student	Hussain Hattpipliya Wala
Institution	MEDI-CAPS University
Programme	Bachelor of Computer Applications (BCA)
Year / Semester	Second Year / Third Semester
Project	Global Olympic Sports Performance Analysis
Analytics tool	Tableau Public

Work breakdown

• 1. Confirm project objective and three scenario questions.

• 2. Inspect the four CSV datasets and field definitions.

• 3. Decide chart types and metrics for each scenario.

• 4. Build worksheets in Tableau Public.

• 5. Assemble three dashboards and improve labels/layout.

• 6. Publish dashboard views and export PDF previews.

• 7. Validate totals, filters and interpretations.

• 8. Complete project documentation and prepare GitHub repository.

Milestone status based on supplied evidence

• Dashboard creation and publication: evidence supplied through three Tableau Public links and PDF exports.

• Dataset packaging: four CSV files included.

• Documentation: being prepared in this package.

• GitHub repository: pending; only username Hussain782 is known, no repository URL has been supplied.

• Workbook/source calculations: should be included or documented before final repository release.

Risk register

• Data grain mismatch may inflate totals — validate relationships and aggregations.

• Ambiguous year labels may confuse users — explain that the supplied games_summary includes 18 records from 1992–2026.

• Causal overinterpretation — describe patterns as associations, not proof.

• Repository incompleteness — add workbook, README, CSV sources, PDFs and a license/data provenance note where appropriate.

Final release checklist

• Verify all three Tableau Public links.

• Open each PDF preview and compare it with the live dashboard.

• Include the Tableau workbook if permitted and available.

• Remove duplicate or obsolete templates.

• Confirm all documentation is PDF and uses consistent project metadata.

• Push the finished folder to GitHub and update README with the actual repository URL.
