Business Questions & Visualisation Report

Mapping each dashboard to its analytical questions

Student	Hussain Hattpipliya Wala
Institution	MEDI-CAPS University
Programme	Bachelor of Computer Applications (BCA)
Year / Semester	Second Year / Third Semester
Project	Global Olympic Sports Performance Analysis
Analytics tool	Tableau Public

Scenario 1 — NOC Performance

Business questions: Which countries/NOCs have the largest medal totals? How do medal outcomes vary across sport categories? How does athlete participation relate to medal performance? What is the gold/silver/bronze composition? The supplied dashboard visibly includes total medals by category, average total medals by sport category, athlete participation and country-level performance/medal mix views.

Scenario 2 — Financial & Strategic Planning

Business questions: How do medal-efficiency percentages vary across investment tiers? How are medal totals distributed across regions? How do host-nation results compare with non-host results? How do athlete/training-related indicators vary by sport category? The dashboard includes an investment efficiency matrix, regional capital allocation, host advantage impact and human-capital efficiency views.

Scenario 3 — Talent Analytics

Business questions: How do total medals change across Games? How do host nations compare with other countries? What medal outcomes appear in hosting years? How are medal totals distributed by region? The supplied dashboard contains all four corresponding views.

Interpretation rules

Use the chart’s actual measure and aggregation. A chart showing total medals is not the same as medal efficiency or per-athlete performance. Treat investment tier and host status as explanatory categories, not proof of causality. Confirm any exact value in the live dashboard/workbook before using it in a formal report.

Visualisation design principles

• Use comparisons that match the question: bars for categories, lines for time sequences, scatter/matrix views for two-variable comparisons.

• Use consistent colours for region or host status.

• Show units, time range and aggregation clearly.

• Avoid crowded country labels; use sorting, filtering or tooltips where supported.
