Dashboard Design Specification

Design specification for the three Tableau dashboards

Student	Hussain Hattpipliya Wala
Institution	MEDI-CAPS University
Programme	Bachelor of Computer Applications (BCA)
Year / Semester	Second Year / Third Semester
Project	Global Olympic Sports Performance Analysis
Analytics tool	Tableau Public

Dashboard 1 — NOC Performance

Purpose: compare country/NOC medal outcomes and related participation measures. Visual elements evidenced in the PDF: total medals by country/NOC, average total medals by sport category, athlete participation versus medal performance, and medal composition. Suggested interaction: region, country/NOC, sport category and year filters where implemented.

Dashboard 2 — Financial & Strategic Planning

Purpose: support exploratory comparison of investment and performance indicators. Visual elements evidenced: investment efficiency matrix, regional capital allocation, host advantage impact and human capital efficiency. Suggested interaction: region, GDP tier, sports investment tier, host-nation status and sport category where available.

Dashboard 3 — Talent Analytics

Purpose: explore medal patterns over time and by host status, country and region. Visual elements evidenced: medal trend across Games, host nation versus other countries, host-country medal performance during hosting years, and regional medal distribution.

Consistency requirements

• Use the same region labels across views.

• Distinguish medal totals from medal points and efficiency percentages.

• Use year ranges in titles and note any non-standard Games-year coverage.

• Make tooltips informative but avoid unsupported interpretations.

• Test filters and ensure the published dashboard opens on a useful default view.

Implementation note

This specification is derived from the three supplied dashboard PDF exports. It does not assert that every suggested filter or interaction is implemented; verify those against the live Tableau views.
