# Story Design & Narrative

A connected narrative across the three scenarios

## Story arc

Begin with the performance landscape, move to strategic planning indicators, then examine athlete/talent patterns. This sequence moves from outcomes (what happened), to resource questions (what might be associated with outcomes), to talent characteristics (which athlete-related patterns merit further investigation).

## Chapter 1 — NOC Performance

Establish country-level and sport-category performance patterns. Compare medal totals and composition, and interpret athlete participation alongside medal outcomes. Avoid equating high totals with high efficiency without considering the denominator.

## Chapter 2 — Financial & Strategic Planning

Explore investment tier and medal efficiency, regional allocation, host status and human-capital indicators. Frame this as a diagnostic view to identify cases for deeper analysis, not as a ranking of which investment policy caused success.

## Chapter 3 — Talent Analytics

Look at Games-level medal trends, host-country patterns and regional distribution. Use athlete attributes only where the relevant underlying fields and aggregation are clear.

## Closing message

The dashboards provide a visual starting point for evidence-informed questions. Stronger decisions require validated data, clear metric definitions, contextual knowledge and additional analysis beyond descriptive charts.
